The Big Deal

- Wide bandwidth
- Rejection upto 2xF_c
- Miniature shielded package

Product Overview

The BPF-BD1800+ is a 50Ω bandpass filter fabricated using SMT technology. This bandpass filter covers from 1600-2000 MHz. This filter is built with high Q capacitors and air-coil inductors for superior performance. It has repeatable performance across lots and consistent performance across temperature.

Key Features

Feature	Advantages
Low insertion loss	Can be used in high performance applications such as radio astronomy.
Good rejection	Rejection upto 2xF_c. This enables the filter to attenuate spurious signals and reject harmonics for broad frequency band.
Shielded case	Reduced interference with and from the surrounding components.
