Surface Mount Digital Step Attenuator

DAT-15575A Series

75Ω 0 to 15.5 dB, 0.5 dB Step 1MHz to 2.5 GHz

The Big Deal

- Wideband, operates up to 2.5 GHz
- · Glitchless attenuation transitions
- High IP3, 52 dBm

CASE STYLE: DG983-2

Product Overview

The DAT-15575A+ series of 75Ω digital step attenuators provides adjustable attenuation from 0 to 15.5 dB in 0.5 dB steps. The control is a 5-bit serial/parallel interface, and the attenuators operate with either single positive or dual (positive and negative) supply voltage. DAT-15575A+ series models are produced by a unique CMOS process on silicon, offering the performance of GaAs with the advantages of conventional CMOS devices.

Key Features

Feature	Advantages
Wideband operation, specified from 1MHz to 2.5 GHz	Can be used in multiple applications such as various versions of DOCSIS, satellite and defense, reducing part count.
Serial or parallel interface	Models available with serial or parallel interface mode to suit customer demand.
Good VSWR, 1.3:1 typ.	Eases interfacing with adjacent components and results in low amplitude ripple.
Single positive supply models: (Model suffixes: -SP+ and -PP+) +2.3 to +3.6V+	Use of single positive supply simplifies power supply design. An internal negative voltage generator supplies the desired negative voltage. Single positive supply results in excellent spurious performance, -140 dBm typical.
Dual supply models: (Model suffixes: -SN+ and -PN+) +2.7 to +3.6V (Positive) and -3.6 to -3.2V (Negative)	Dual supply provides spurious-free operation. It also allows fast switching up to 1 MHz (vs. 25 kHz for single supply).
Useable over a wide range of supply voltages, +2.3/2.7 to 5.2V	Wide range fo positive operating voltages allows the DAT-15575A+ Series of models to be used in a wide range of applications. See Application Note AN-70-032 for operation above +3.6V
Footprint compatible to DAT-15575-XX+ Series (XX=SN/SP/PN/PP)	Can fit into existing footprint and provide wideband performance, to 2.5 GHz instead of 2.0 GHz.
Glitchless Attenuation Transitions, 0.26 typical	Compared to previous generation of digital attenuatiors which is a vast improvement.

75Ω 1-2500 MHz

15.5 dB, 0.5 dB Step5 Bit, Serial Control Interface, Dual Supply Voltages

Product Features

- Dual Supply (Positive & Negative) Voltages
- Immune to latch up
- Glitchless attenuation transitions
- Excellent accuracy, 0.1 dB Typ
- Serial control interface
- Low Insertion Loss
- High IP3, +55-69 dBm
- Excellent return loss, 18 dB typ.
- Very low DC power consumption
- Small size 4.0 x 4.0 mm

Typical Applications

- DOCSIS 3.1
- Portable Wireless
- Fiber CPE and infrastructure
- MMDS & Wireless LAN
- Satellite CPE and infrastructure
- UNII & Hiper LAN
- Power amplifier distortion canceling loop

DAT-15575A-SN+

CASE STYLE: DG983-2

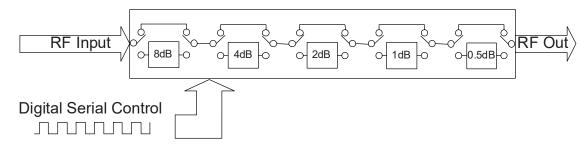

+RoHS Compliant

The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

General Description

The DAT-15575A-SN+ is a 75Ω RF digital step attenuator that offers an attenuation range up to 15.5 dB in 0.5 dB steps. The control is a 5-bit serial interface, operating on dual (positive and negative) supply voltages. The DAT-15575A-SN+ is produced using a unique CMOS process on silicon, offering the performance of GaAs, with the advantages of conventional CMOS devices.

Pin Description

Function	Pin Number	Description			
N/C	1	Not connected (Note 8)			
RF in	2	RF in port (Note 1)			
Data	3	Serial Interface data input (Note 3)			
Clock	4	Serial Interface clock input			
LE	5	Latch Enable Input (Note 2)			
V_{DD}	6	Power Supply			
N/C	7	Not connected (Note 7)			
N/C	8	Not connected			
V _{DD}	9	Power Supply			
GND	10	Ground connection			
GND	11	Ground connection			
V _{SS}	12	Negative Supply Voltage			
V_{DD}	13	Power Supply			
RF out	14	RF out port (Note 1)			
C8	15	Control for attenuation bit, 8 dB (Note 4)			
C4	16	Control for attenuation bit, 4 dB (Note 4)			
C2	17	Control for attenuation bit, 2 dB (Note 4)			
GND	18	Ground Connection			
C1	19	Control for attenuation bit, 1 dB (Note 4)			
C0.5	20	Control for attenuation bit, 0.5 dB (Note 4, 7)			
GND	Paddle	Paddle ground (Note 5)			

Notes:

- Both RF ports must be held at 0VDC or DC blocked with an external series capacitor.
 RF in and RF out are interchageable.
- 2. Latch Enable (LE) has an internal 2M Ω pull-up resistor to V_{DD} .
- 3. Place a 10K Ω resistor in series to be compattible with previous generation of models. 10K Ω can be omitted in new designs.
- 4. Refer to Power-up Control Settings.
- 5. The exposed solder pad on the bottom of the package (See Pin configuration) must be grounded for proper device operation.
- 6. N/A
- 7. This pin has internal $1M\Omega$ short resistor to ground.
- 8. Place $10K\Omega$ resistor to ground externally.

Pin Configuration (Top View)

Device Marking

Simplified Schematic

The DAT-15575A-SN+ Serial interface consists of 5 control bits that select the desired attenuation state, as shown in **Table 1**: Truth Table

Table 1. Truth Table								
Attenuation State	C8	C4	C2	C1	C0.5			
Reference	0	0	0	0	0			
0.5 (dB)	0	0	0	0	1			
1 (dB)	0	0	0	1	0			
2 (dB)	0	0	1	0	0			
4 (dB)	0	1	0	0	0			
8 (dB)	1	0	0	0	0			
15.5 (dB)	1	1	1	1	1			
Note: Not all 32	possible cor	nbinations o	of C0.5 - C8	are shown	in table			

The serial interface is a 5-bit serial in, parallel-out shift register buffered by a transparent latch.

It is controlled by three CMOS-compatible signals: Data, Clock, and Latch Enable (LE). The Data and Clock inputs allow data to be serially entered into the shift register, a process that is independent of the state of the LE input.

The LE input controls the latch. When LE is HIGH, the latch is transparent and the contents of the serial shift register control the attenuator. When LE is brought LOW, data in the shift register is latched.

The shift register should be loaded while LE is held LOW to prevent the attenuator value from changing as data is entered. The LE input should then be toggled HIGH and brought LOW again, latching the new data. The timing for this operation is defined by **Figure 3** (Serial Interface Timing Diagram) and **Table 2** (Serial Interface AC Characteristics).

Figure 3: Serial Interface Timing Diagram

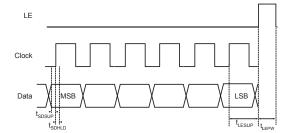

Table 2. Serial Interface AC Characteristics							
Symbol	Parameter Min. Max.		Max.	Units			
f _{clk}	Serial data clock frequency (Note 1)		10	MHz			
t _{clkH}	Serial clock HIGH time	30		ns			
t _{clkL}	Serial clock LOW time	30		ns			
t _{LESUP}	LE set-up time after last clock falling edge	10		ns			
t _{LEPW}	LE minimum pulse width	30		ns			
t _{SDSUP}	Serial data set-up time before clock rising edge	10		ns			
t _{SDHLD}	Serial data hold time after clock falling edge	10	1.00.00	ns			

Note 1. fclk verified during the functional pattern test. Serial programming sections of the functional pattern are clocked at 10MHz to verify fclk specification.

The DAT-15575A-SN+, uses a common 5-bit serial word format, as shown in **Table 3**: 5-Bit attenuator Serial Programming Register Map.

The bit B4, corresponds to the 8-dB Step and the last bit, the LSB, corresponds to the 0.5 dB step.

Table	Table 3. 6-Bit attenuator Serial Programming Register Map							
B5	B4	В3	B2	B1	В0			
0	C8	C4	C2	C1	C0.5			
†					†			
MSB (first in)					LSB (last in)			

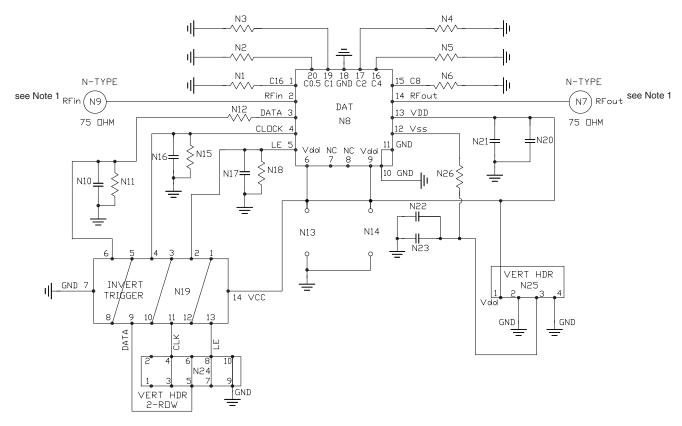

Power-up Control Settings

The DAT-15575A-SN+ always assumes a specifiable attenuation setting on power-up, allowing a known attenuation state to be established before an initial serial control word is provided.

When the attenuator powers up, the five control bits are set to whatever data is present on the six data inputs (C0.5 to C8).

This allows any one of the 32 attenuation settings to be specified as the power-up state.
