PRODUCT OVERVIEW

The FL47 Series Flexible Coaxial Cables are ideal for interconnection of coaxial components or sub-systems. The construction includes a silver-plated copper-clad steel center conductor. The outer shield is copper braid, tin soaked, which minimizes signal leakage and at the same time flexible for easy bend. Dielectric is low loss PTFE. Connectors have passivated stainless-steel coupling nut over a gold plated connector body with gold plated brass center conductor. The FL47 Series Flexible cables are available in variety of length to meet your requirements.

KEY FEATURES

Feature	Advantages
Flexible RF Cables	The FL47 Series Flexible cables are ideal for use integrating coaxial components and subassemblies without the need for special cable-bending tools and alleviating the risk of damageduring the bending process typical of semi-rigid coaxial cable assemblies.
Tight Bend Radius: 5mm static bend, 10mm dynamic	Capable of only 5mm static bend, 10mm dynamic bend radius, the FL47 Flexible series is able to make connections in tight spaces making these cables ideal for dense system integration
Excellent Return Loss, • 30 dB at 26.5 GHz	The FL47 Series Flexible Cables are ideally suited for interconnecting a wide variety of RF components while minimizing VSWR ripple contribution due to mating cables & connectors.
Good Power Handling Capability: • 61W at 0.5 GHz • 8W at 18 GHz	Mini-Circuits FL47 Cable series can support medium to high RF power levels enabling these cables to be used in the transmit path. NOTE: power rating is at sea-level altitudes
