PRODUCT OVERVIEW

Mini-Circuits' M3SWA2-34DR+ is a GaAs MMIC SPDT absorptive switch with an internal driver designed for wideband operation from DC to 30 GHz. This switch enables fast, nano-second switching across a wide frequency range with minimum gate lag effects. This model provides excellent isolation, high linearity and is capable of withstanding +27 dBm RF input power. It is packaged in a small 3x3 mm QFN-Style package for ease of integration in compact assemblies.

KEY FEATURES

Features	Advantages
Absorptive Design	Absorptive switch design enables excellent return loss on all ports, minimizing reflection at the unselected port.
High Isolation: • 61 dB Typ. RFC to RF1/RF2 • 65 dB Typ. RF1 to RF2	High isolation significantly reduces leakage of power into OFF ports.
High Linearity and Input Power: • Input Power at P1dB, +25.2 dBm Typ. • Input IP3, +48 dBm Typ. • Max RF Input Power, +27 dBm CW	High linearity minimizes unwanted intermodulation products which are difficult or impossible to filter in multi-carrier environments, or in the presence of strong interfering signal from adjacent circuitry. High RF input power tolerance protects the device from damage due to unexpected spikes in signal level.
Fast RF Switching Time: • Rise/Fall Time, Typ. 6.9 ns/7.1 ns • On/Off Time, Typ. 23.3 ns/16.5 ns • Settling to 0.05 dB, Typ. 29 ns	Fast switching makes this model suitable for applications where extremely fast transition between ports is required, such as automated switching networks.
Compact Size, 3x3 mm	Small footprint saves space in dense layouts, while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB. Industry standard packaging allows for ease of assembly in high volume manufacturing processes.
