PRODUCT OVERVIEW

The PMA3-24323LN+ is a pHEMT based wideband, low noise MMIC amplifier with a unique combination of high dynamic range and low noise figure over a very broad bandwidth making it ideal for use in a wide variety of transmitter and receiver applications. This amplifier offers market competitive performance focused on Ka-band satellite communications applications as a 50Ω matched amplifier requiring no external matching. The PMA3-24323LN+ is ideal as a 2nd stage amplifier without degrading overall system noise floor on the receive side, or as a low noise pre-driver or driver on the transmit side. This design operates on a single 5V positive supply and comes in a small plastic package (3 x 3 x 0.89mm), accommodating dense circuit board layouts.
