# RF SP4T Switch Matrix RC-1SP4T-50

50Ω DC to 50 GHz 2.4 mm-Female

## THE BIG DEAL

- Mechanical SP4T switch
- Excellent performance to 50 GHz
- High reliability, 2 million switch cycles
- 3W power rating (cold switching)

## APPLICATIONS

- 5G node / device testing
- Automated test equipment
- Fail-safe / redundancy switching

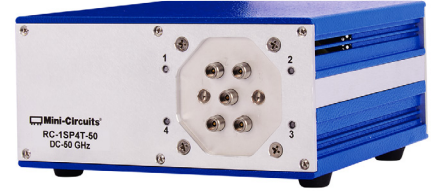

## PRODUCT OVERVIEW

Mini-Circuits' RC-1SP4T-50 is an electro-mechanical SP4T switch operating over an extremely wide bandwidth, from DC to 50 GHz with high isolation and low insertion loss. The absorptive switch is of a failsafe and break-before-make-configuration, with a minimum lifetime of 2 million switching cycles per switch position, when used within the noted specifications.

The switch box is constructed in a compact, rugged metal case (5.5 x 6.0 x 2.75") with all 2.4 mm (f) RF connectors on the front panel. The switches are controlled via USB or Ethernet, allowing control directly from a PC, or remotely over a network. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

## KEY FEATURES

| Feature                         | Advantages   |
|---------------------------------|--|
| Mechanical SP4T switch          | Mechanical absorptive switches provide high reliability, repeatable high performance and internal terminations of input signals on the disconnected paths  |
| Operation from DC to 50 GHz     | Supports a wide range of RF test and signal routing applications, including 2G, 3G, 4G and 5G, with a single device.   |
| Break-before-make configuration | Prevents a momentary connection of the old and new signal paths, reducing the inconsistent transient effects that could otherwise be observed during switching   |
| USB & Ethernet control          | USB HID and Ethernet (HTTP / Telnet) interfaces provide easy compatibility with a wide range of software setups and programming environments   |
| Full software support           | User friendly Windows GUI (graphical user interface) allows manual control straight out of the box, while the comprehensive API (application programming interface) with examples and instructions allows easy automation in most programming environments |
