Phase Shifter

SCPHS-180+

50Ω 360° Voltage Variable 90 to 180 MHz

The Big Deal

- Low insertion loss, 2.2 dB typ.
- Wide phase shift, 360°
- Low frequency and small size

CASE STYLE: HU1371

Product Overview

Mini-Circuits' SCPHS-180+ is a voltage variable phase shifter providing 360°phase control from 90 to 180 MHz in a miniature surface mount package. This model has a control bandwidth of DC to 30 kHz and a control voltage range from 0 to +10V. Housed in a shielded, 12-lead package with wrap-around terminations, the unit measures only 0.87 x 0.80 x 0.25", offering a space-efficient, low-cost alternative to larger, expensive connectorized phase shifters typical for low frequency operation.

Feature	Advantages
Low insertion loss, 2.2 dB typ.	Enables good transmission of signal power from input to output and minimizes effect on system noise figure.
Wide phase shift, 360°	In test environments, 360˚ phase control allows the user to experiment with various incident phases. This can be used to test residual phase noise of amplifiers and to determine the influence of phase between two mismatched components in a system.
Low frequency operation and tiny size, 0.87 x 0.80 x 0.25"	Typically, lower frequency phase shifters are large, connectorized designs. SCPHS-180+ provides low frequency phase shift capability in a tiny surface mount package, saving space and reducing system cost.
