

# Low Noise Amplifier

## TAMP-960LN+

50Ω 824 to 960 MHz

### The Big Deal

- Ultra Low Noise Figure, 0.55 dB typ.
- High IP3, 30 dBm typ.
- Good VSWR, 1.2:1 typ.
- Low Current, 40mA at +5V
- Integrated Bias Matching and Stabilization Circuits

CASE STYLE: JQ1382

### Product Overview

The TAMP-960LN+ (RoHS compliant) utilizes advanced E-PHEMT technology in a single stage low noise amplifier design built into a shielded case (size: .591"x.394"x.118"). The drop-in module offers ultra low noise figure and high output IP3 with good input and output return loss over the entire frequency range and without the need of external matching components.

### Key Features

Feature	Advantages
Ultra Low NF	With only 0.55 dB NF, the TAMP-960LN+ enables greater sensitivity for receiver applications. It includes all matching and stability circuits making this Drop-in LNA module a turn-key solution for ensuring low system sensitivity in demanding applications.
High Output IP3	At +30 dBm IP3, in combination with its low noise performance, the TAMP-960LN+ can improve a systems' spur-free dynamic range which is often the critical driver in many receiver applications.
Low Current, 40mA typ.	At only 40mA, the TAMP-960LN+ is ideal for applications with limited available power or densely packed applications where thermal and power management is critical.
High P1dB: 16.5dBm typ.	High P1dB enables the amplifier to operate in linear region in the presence of strong interfering signals.
Well Matched input/ output ports	With typical input VSWR of 1.1:1 and output VSWR of 1.35:1, the TAMP-960LN+ can be used in cascade with many 50 Ohm components and maintain minimal interaction or reflections.
Drop-in Module	Eliminates the need for designers to optimize low noise transistor bias and matching circuitry. The TAMP-960LN+ provides the outstanding combined performance and does not require any external elements. The case PCB area is smaller than most LNA transistor designs with external circuitry.
Metal Case	Provides a protective enclosure improving handling robustness in addition to shielding the sensitive high gain devices from close by circuitry.
Unconditionally stable	No adverse effects due to reactive loads at the input and output ports avoiding potential instability which can be a critical requirement when integrating high gain, high frequency devices on an open PCB assembly.
