PRODUCT OVERVIEW

TPCG-1852+ is a miniature low temperature co-fired ceramic (LTCC) 50 Ohm transmission line, with low insertion loss through 18.5GHz that supports a variety of applications. This model provides 0.5dB typical insertion loss over a wide band due to its rugged monolithic construction. Housed in a tiny 0805 ceramic form factor with inspectable wrap-around terminations, the transmission line is ideal for dense signal chain PCB layouts, where it complements MMIC size and performance. The LTCC fabrication process assures minimal RF performance variation while delivering a product that is well suited for environmental extremes of high humidity and temperature.

KEY FEATURES

Features	Advantages
Footprint Compatible "Thru-Line"	Enables system designers the flexibility to plan to add LTCC filters to the PCB layout at a later stage in the design process, after system test results are available. Compatible with Mini-Circuits high pass filters (HFCG series), with identical case style and pad connections.
LTCC Construction	The use of LTCC technology allows for repeatable performance in a rugged ceramic package, well suited for tough environments such as high humidity and temperature extremes. See Mini-Circuits Environmental Rating ENV06T11 for more information.
Small Size, 0805	0805 package allows for space to be saved in dense circuit board layouts, while also minimizing the effects of parasitics.
Wrap-around Terminations	Provides excellent solderability and easy visual inspection.
Rugged Power Handling, 8.5W	Handles up to 8.5 Watts in a small 0805 package.
