## The Big Deal

- High rejection
- Good VSWR
- Connectorized package

## Product Overview

ZABP-550-S+ is a 50Ω bandpass filter with a rugged connectorized package covering the passband of 100 to 1000 MHz. The bandpass filter offers good matching within the passband and provides high rejection. This filter has miniature high Q capacitors and wire welded inductors for high reliability. It has repeatable performance across lots and consistent performance across temperature.

## Key Features

| Feature | Advantages |
|---|---|
| High rejection | ZABP-550-S+ has sharper transition and rejects spurious signals in the stopband. |
| Good VSWR | This filter maintains typical VSWR over passband frequency range making this filter easier to integrate into receiver and transmitter RF chains with less concerns for in band frequency ripple. |
| Connectorized package | Connectorized package is easy to interface with other devices and well suited for test setups. |
