Product Overview

Mini-Circuits' ZSW2-63DR+ is a 50 Ω high power SPDT RF switch designed for automatic test equipment applications, covering a broad frequency range from 5 to 6000 MHz with low insertion loss and high linearity.

The ZSW2-63DR+ operates on a single supply voltage from +2.3 V to +4.8 V with a single pin control. The switch comes housed in a rugged, compact, aluminum alloy case (2.00 x 1.5 x 0.6") with 3 SMA-F connectors at RF ports and a 9-pin D-sub connector for DC power and control signals.

Key Features

Feature	Advantages
Wideband, 5 to 6000 MHz	One model can be used in many applications, saving component count. Also ideal for wideband applications such as military and instrumentation.
High linearity, + 73 dBm IP3	High linearity minimizes unwanted inter-modulation products which are difficult or impossible to filter in multi-carrier environments, or in the presence of strong interfering signal from adjacent circuitry or received by antenna.
Low insertion loss: <ul style="list-style-type: none">• 0.33 dB up to 1000 MHz• 1.1 dB up to 6000 MHz	Provides excellent transmission of signal power from input to output and minimizes overall system loss
High power: <ul style="list-style-type: none">+36 dBm up to 6000 MHz	Suitable for signal routing applications with high power requirement such as antenna feeds in transmit systems and more.
