16-Channel Attenuator

ZT16DAT-8G95S

Mini-Circuits

50 Ω 1 to 8000 MHz 0 to 95 dB Rack-Mount SMA Female

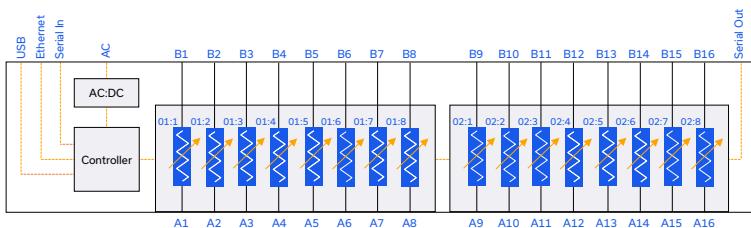

THE BIG DEAL

- 16 independently programmable channels
- 0-95 dB attenuation per channel in 0.25 dB steps
- 100 dB isolation between channels
- Configure automated sweep, hop & fading sequences
- Daisy-chain control stacking of multiple attenuator systems
- Convenient rack-mountable chassis
- SSH secure Ethernet communication

FUNCTIONAL BLOCK DIAGRAM

APPLICATIONS

- Benchtop and rack-mounted automated test systems
- 5G FR1, WiFi 6E MIMO, IoT & Zigbee device testing
- C-band radar & Satcom testing
- Transmission loss, signal fading & cellular handover testing

PRODUCT OVERVIEW

Mini-Circuits' ZTDAT series multi-channel programmable attenuator systems are ideal for a wide range of signal level control applications including transmission loss simulation, signal fading, and MIMO measurements. ZT16DAT-8G95S operates from 1 MHz to 8 GHz with typically 100 dB isolation between 16 bi-directional attenuator channels. Each channel can be independently controlled from 0 to 95 dB attenuation with 0.25 dB resolution.

The system is housed in a compact, 1U height, 19-inch rack chassis, with SMA female connectors on the front and rear panels, and all power and control connections on the rear panel.

The system can be controlled via USB or Ethernet (supporting SSH, HTTP & Telnet protocols). Full software support is provided, including our user-friendly GUI application for Windows, flexible API, and programming instructions for Windows and Linux environments.

The daisy-chain control interface with "dynamic addressing" simplifies control integration by interconnecting multiple attenuator racks via their respective serial in and out connections. The system automatically identifies and addresses all devices within the daisy chain, allowing each to be independently controlled through the single USB / Ethernet connection of the first unit in the chain.

KEY FEATURES

Feature	Advantages
Sweep/hop / fading sequences	Configure a wide range of real-world scenarios in a test environment, including receiver sensitivity, device / base-station handovers, device failures, and interference effects.
High isolation	High isolation between channels and from input to output when max attenuation is set; minimizes cross-talk and measurement errors.
Rack-mount chassis	Compact 1U height, 19" rack-mountable chassis suits integration in automated production test environments
Secure Ethernet communication	Support for SSH (Secure Shell protocol) provides a means for secure communication over Ethernet networks with strict security policies. HTTP & Telnet communication via Ethernet are also supported.

	Requirements	Additional ZTDAT attenuator racks with one unit connected using USB or Ethernet

6. Based on the polling interval of the USB HID protocol (125 μs with 64 bytes per packet) and no other significant CPU or USB activity

SOFTWARE & DOCUMENTATION

Mini-Circuits' full software and support package including user guide, Windows GUI, API, programming manual and examples can be downloaded free of charge (refer to the last page for the download path).

A comprehensive set of software control options is provided:

- GUI for Windows – Simple software interface for control via Ethernet and USB
- Programming / automation via Ethernet
 - Complete set of control commands which can be sent via any supported protocol – simple to implement in the majority of modern programming environments
- Programming / automation via USB
 - DLL files provide a full API for Windows with a set of intuitive functions which can be implemented in any programming environment supporting .Net Framework or ActiveX
 - Direct USB programming is possible in any other environment (not supporting .Net or ActiveX)

Please contact testsolutions@minicircuits.com for support

MINIMUM SYSTEM REQUIREMENTS

Hardware	Intel i3 (or equivalent) or later
GUI (USB or Ethernet Control)	Windows 7 or later
USB API DLL	Windows 7 or later with support for Microsoft .Net Framework or ActiveX
USB Direct Programming	Windows 7 or later; Linux
Ethernet	Windows, Linux or macOS with Ethernet TCP / IP support

PROGRAMMING COMMANDS

The key ASCII / SCPI commands for control of the system for control via the Ethernet or USB API are summarized below (refer to the programming manual for full details):

Command / Query	Description
:MN?	Read model name
:SN?	Read serial number
:FIRMWARE?	Read firmware version
:CHAN:[channels]:SETATT:[value]	Set attenuation <ul style="list-style-type: none"> • [address] = Address of the 8-channel attenuator block within the ZTDAT system (01 or 02) • [channels] = Channel number to set (1 to 8) within the 8-channel attenuator block. Multiple channels can be listed in a string, separated by a colon ":". • [value] = Attenuator value in dB (from 0.00 to 95.00) • Example :01:CHAN:1:2:3:SETATT:10.25
:[address]:[channel]:ATT?	Return a single attenuator value <ul style="list-style-type: none"> • [address] = Address of the 8-channel attenuator block within the ZTDAT system (01 or 02) • [channels] = Channel number to query (1 to 8) within the 8-channel attenuator block. • Example :01:CHAN:1:ATT?
