

### **USB & ETHERNET** 9-Port Mesh Network Emulator **ZTMN-0995C-S**

Mini-Circuits

600 to 7200 MHz Rack-Mount SMA Female 50Ω

### **THE BIG DEAL**

- 9 fully interconnected test ports
- Compact rack-mountable chassis, 3U height
- 95 dB programmable attenuation per path
- Configure automated sweep / hop / fading sequences
- Ethernet & USB control

Generic photo used for illustration purposes only

### FUNCTIONAL BLOCK DIAGRAM

### **APPLICATIONS**

- 5G FR1 / WiFi 6E / IoT / Zigbee device testing
- ISM band fire & security monitoring
- Production, R&D, qualification testing
- Smart home & energy monitoring systems
- Test & measurement systems

### **PRODUCT OVERVIEW**

Mini-Circuits' ZTMN series mesh network emulators are multi-port test systems with independently variable attenuation on each internal path. This concept allows simulation of a "real-world" mesh communication network within the confined space of a production environment. Path loss can be varied independently between any pair of devices on the network without affecting any other combination of devices, allowing simulation of a complex range of test cases.

ZTMN-0995C-S is a 9-port mesh covering the 0.6-7.2 GHz bands, with 0 to 95 dB attenuation range on each of the internal paths. The model is housed in a compact, 3U height, 19-inch rack chassis with all RF connectors on the front panel. The ZTMN series also supports larger mesh network combinations, custom attenuation and frequency ranges available on request.

The system can be controlled via USB or Ethernet (supporting SSH, HTTP & Telnet protocols). Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

Feature	Advantages
Wide attenuation range	Independently controllable 0-95 dB attenuators on each path allow simulation of a wide range of test scenarios including receiver sensitivity, device / base-station handovers, device failures, and interference effects.
Wide bandwidth	Operation from 0.5-7.2 GHz incorporates most of the key commercial wireless mesh network applications, including WiFi 6E, 5G FR1 and Zigbee.
Rack-mount chassis	Compact 3U height, 19" rack-mountable chassis suits integration in automated production test environments.
Secure Ethernet communication	Support for SSH (Secure Shell protocol) provides a means for secure communication over Ethernet networks with strict security policies. HTTP & Telnet communication via Ethernet are also supported.

Mini-Circuits

600 to 7200 MHz Rack-Mount SMA Female 50Ω

### **ELECTRICAL SPECIFICATIONS AT +25°C**

Parameter	Conditions	Min.	Тур.	Max.	Units
Frequency Range		600		7200	MHz
	600-3000 MHz		26	29	
Insertion Loss <sup>1</sup>	3000-6000 MHz		30	33	dB
	6000-7200 MHz		33	36	
	Direct path (600-7200 MHz) <sup>2</sup>	h (600-7200 MHz) <sup>2</sup> 110			dB
Isolation	Leakage path (600-7200 MHz) <sup>3</sup>		60		
Return Loss			15		dB
Input Power	Per port			+25	dBm
Attenuation Range	Per Path	0		95	dB
Attenuation Steps	0 – 90 dB Range		0.25		dB

1. Path loss on the direct path between 2 ports when the attenuator in path is at 0 dB

2. Path loss on the direct path between 2 ports with all attenuators at max attenuation

3. Path loss on the leakage path between 2 ports with the 2 attenuators in the leakage path at 0 dB and all others at max attenuation

The green path in the diagram opposite is the direct path between ports 1 & 2. In an ideal mesh this would be the only route between these 2 ports. The insertion loss (IL) on the green direct path is approximately as below, when the attenuator highlighted in green is set to 0 dB:

### IL<sub>DIRECT</sub> = IL<sub>SPLITTER</sub> + IL<sub>ATTENUATOR</sub> + IL<sub>SPLITTER</sub>

The red path highlights an indirect, leakage path which also exists between ports 1 & 2 due to the finite isolation of the splitter / combiner component. A number of similar leakage paths also exist across the output ports of the other splitter / combiner components within the mesh. The worst-case isolation (ISO) of the red leakage path is approximately as below, when the attenuators highlighted in red are set to 0 dB:

# ISO<sub>LEAKAGE</sub> = IL<sub>SPLITTER</sub> + IL<sub>ATTENUATOR</sub> + ISO<sub>SPLITTER</sub> + IL<sub>ATTENUATOR</sub> + IL<sub>SPLITTER</sub>

Mini-Circuits minimizes the leakage paths by design; a well-designed splitter / combiner component can offer in the order of 20 dB isolation over a wide bandwidth It is not possible to remove entirely the leakage paths but their effects can be mitigated during operation of the mesh through careful choice of the programmable attenuation values in path. Mini-Circuits' recommendations are: 1. Terminate any unused external ports around the mesh to ensure the best impedance match throughout.

2. Set all programmable attenuators to their maximum values (95 dB) initially to ensure all direct and leakage paths are isolated, then reduce the attenuation on the specific paths required by the test scenario.

3. When leakage paths are affecting measurements, consider increasing the value on all internal programmable attenuators to minimize their significance. Every 1 dB increase in insertion loss on all direct paths, leads to a 2 dB increase on all indirect paths.

## 9-Port Mesh Network Emulator **ZTMN-0995C-S**

Mini-Circuits

50Ω 600 to 7200 MHz Rack-Mount SMA Female

### **CONTROL INTERFACES**

Ethernet Control	Supported Protocols	TCP / IP, SSH, HTTP, Telnet, DHCP, UDP (limited)
Ethemet Control	Max Data Rate	100 Mbps (100Base-T Full Duplex)
USB Control	Supported Protocols	HID – High Speed
USB CONTROL	Min Communication Time <sup>5</sup>	400 µs typ

5. Based on the polling interval of the USB HID protocol (125 µs with 1024 bytes per packet) and no other significant CPU or USB activity

### **SOFTWARE & DOCUMENTATION**

Mini-Circuits' full software and support package including user guide, Windows GUI, API, programming manual and examples can be downloaded free of charge (refer to the last page for the download path).

A comprehensive set of software control options is provided:

- · GUI for Windows Simple software interface for control via Ethernet and USB
- Programming / automation via Ethernet
- Complete set of control commands which can be sent via any supported protocol simple to implement in the majority of modern programming environments
- Programming / automation via USB
  - DLL files provide a full API for Windows with a set of intuitive functions which can be implemented in any programming environment supporting .Net Framework or ActiveX
  - Direct USB programming is possible in any other environment (not supporting .Net or ActiveX)

Please contact testsolutions@minicircuits.com for support

### MINIMUM SYSTEM REQUIREMENTS

Hardware	ntel i3 (or equivalent) or later		
GUI (USB or Ethernet Control)	ndows 7 or later		
USB API DLL	Nindows 7 or later with support for Microsoft .Net Framework or ActiveX		
USB Direct Programming	Windows 7 or later; Linux		
Ethernet	Windows, Linux or macOS with Ethernet TCP / IP support		

### **PROGRAMMING COMMANDS**

The key ASCII / SCPI commands for control of the system for control via the Ethernet or USB API are summarized below (refer to the programming manual for full details):

Command / Query	Description
:MN?	Read model name
:SN?	Read serial number
:FIRMWARE?	Read firmware version
:[address]:[channels]:SETATT:[value]	<ul> <li>Set attenuation:</li> <li>[address] = Address of the attenuator module (refer to the Attenuator Path Map table)</li> <li>[channels] = Channel number (1 to 8) within the 8-channel attenuator module. Multiple channels can be listed in a string, separated by colon (":").</li> <li>[value] = Attenuation value to set (from 0 to 95 dB)</li> <li>Example:</li> <li>01:CHAN:1:2:3:SETATT:10.25</li> </ul>
:[address]:[channels]:ATT?	<ul> <li>Return a single attenuator value:</li> <li>[address] = Address of the attenuator module (refer to the Attenuator Path Map table)</li> <li>[channels] = Channel number (1 to 8) within the 8-channel attenuator module</li> <li>Example:</li> <li>01:CHAN:1:ATT?</li> </ul>

### **GRAPHICAL USER INTERFACE (GUI) FOR WINDOWS**

- Connect via USB or Ethernet
- Run GUI in demo mode to evaluate software without a hardware connection

- · View and set all attenuator values, independently or in groups
- · Configure automated sweep / hop / fading sequences
- Apply custom port / path names
- Configure system and Ethernet settings
