PRODUCT OVERVIEW

Mini-Circuits' ZVA-0.5W303G+ is an ideal choice for applications requiring a wideband driver amplifier. This coaxial, wideband RF amplifier operates over 10 MHz to 30 GHz, delivering a saturated output power of +27 dBm at a typical 1dB compression point of +25 dBm. Ideal for many applications that require higher dynamic range, with a low noise figure of 4.2 dB typ. across majority of the band. A combination of this amplifier with the lab test setups, makes it a versatile choice for high power test applications. Complementary safety features such as protection against DC transients, over-voltage and reverse voltage conditions ensure that the amplifier stays protected against mishandling.

KEY FEATURES

Feature	Advantages
Ultra-wideband, 0.01 to 30 GHz	Enables a single amplifier to be used in a wide range of applications.
Excellent gain flatness, ±1.5 dB across full frequency range	Provides consistent performance across its operating frequency, minimizing the need for external equalizing networks in wideband applications.
Low noise and high IP3: • NF, 4.2 dB typ. • IP3, +34 dBm typ.	The combination of low noise and high IP3 makes the ZVA-0.5W303G+ ideal for use in receiver front end (RFE) as it gives the user the advantages of sensitivity and two-tone IM performance at both ends of the dynamic range.
Rugged design	Built-in protection against DC transients, reverse voltage and over-voltage provides added reliability for demanding operating conditions.
