PRODUCT OVERVIEW

Mini-Circuits' ZVA-183A-S+ is a coaxial, wideband RF amplifier capable of operating from 700 MHz to 18 GHz. The design can deliver output power of +27 dBm at saturation and +24 dBm typ. at 1dB compression, making it an ideal choice for applications requiring a wideband driver amplifier. With a low noise figure of 4 dB typ. across majority of the band, it can be used in test setups that require higher dynamic range. Complementary safety features such as protection against DC transients, over-voltage and reverse voltage conditions ensure that the amplifier stays protected against mishandling.

KEY FEATURES

Feature	Advantages
Ultra-wideband, 700 MHz to 18 GHz	Enables a single amplifier to be used in a wide range of applications.
Excellent gain flatness, ± 1.5 dB across full frequency range	Provides consistent performance across its operating frequency, minimizing the need for external equalizing networks in wideband applications.
Low noise and high IP3: <ul style="list-style-type: none"> • NF, 4 dB typ. • IP3, +34 dBm typ. 	The combination of low noise and high IP3 makes the ZVA-183A-S+ ideal for use in receiver front ends (RFE) as it gives the user the advantages of sensitivity and two-tone IM performance at both ends of the dynamic range.
Rugged design	Built-in protection against DC transients, reverse voltage and over-voltage provides added reliability for demanding operating conditions.
