### PRODUCT OVERVIEW

BFHKL-1742+ is a miniature low temperature co-fired ceramic (LTCC) ultra-high stopband rejection band pass filter with a 16 to 19 GHz passband that supports a variety of applications. This model achieves 66 dB typical stopband rejection up to 40 GHz, when mounted on coplanar waveguide layouts. Housed in a small 4.95 mm by 3.65 mm ceramic form factor, the filter is ideal for dense signal chain PCB layouts where it complements MMIC size and performance. The BFHKL family with integrated interposer board enables installation onto PCB layouts with automated manufacturing equipment. This model provides 3 dB typical insertion loss over a wide band due to its rugged monolithic construction. The LTCC fabrication process assures minimal RF performance variation while delivering a product that is well suited for environmental extremes of high humidity and temperature.

### KEY FEATURES

Features	Advantages
Surface Mountable due to Integrated Interposer Board	Enables installation with automated manufacturing equipment, making this suitable for high-volume processes.
Wide Rejection	Provides high stopband rejection of 66 dB typical up to 40 GHz.
Small Size (4.95 x 3.65 mm)	Saves space in dense circuit board layouts and minimizes the effects of parasitics.
LTCC Construction	Provides repeatable performance in a rugged, ceramic package well suited for tough environments such as high humidity and temperature extremes.
Cost Effective	LTCC is a scalable technology that is cost effective due to its ease of production in high-volume.
