PRODUCT OVERVIEW

EQY-6-123+ is a wideband, absorptive gain slope equalizer fabricated using a highly reliable and repeatable GaAs MMIC IPD process. Operating from DC to 12 GHz, this model achieves outstanding linear slope while maintaining excellent return loss throughout the entire band due to its absorptive design. This model is packaged in a compact 1.5x1.5 mm package, making it an ideal choice for dense circuit layouts across a wide range of applications such as Test & Measurement, Satellite Communications, and Radar, EW, and ECM Defense Systems.

KEY FEATURES

Feature	Advantages
Wideband Operation, DC to 12 GHz	Broadband positive gain slope equalization can effectively compensate negative gain slope of amplifiers, receivers, transmitters and transmission lines to achieve flat gain across frequency in wideband systems.
Excellent Return Loss, 14 dB Typ.	Excellent return loss across the full frequency range minimizes unwanted reflections and enables this model to be seamlessly cascaded within wideband signal chains.
1.5x1.5 mm 6L QFN-Style Package	Small footprint saves space in dense layouts while providing low inductance and excellent thermal contact to the PCB. Industry-standard packaging allows for ease of assembly in high-volume manufacturing processes.
